

GENERAL PURPOSE

Personal Use Cushion

Simple, easy, light-weight add-on cushion pad. The result is a superior level of comfort, improving the user's overall daily experience.

- **Improved comfort** is achieved through the use of a special "engineered" 3-D spacer fabric. This fabric supports the body over a wider area of the cushion and significantly reduces the discomfort and pain caused by high pressure points.
- Through the use of a BodyTrack® Pressure Mat we have conducted over **200 individual tests** in a wide variety of cushioning materials. Nothing equalled the performance of this fabric.
- Fabric is **100% breathable** and remains cool without absorbing moisture. Cushion does not collapse over time and maintains its original thickness.
- **1/2 inch thickness** - improves operator stability over common 1½" to 3" thick gel style add-on cushions.

DISCLAIMER: Our 3-D "engineered" cushions are designed to improve "comfort" issues on seats with molded foam cushions only. Use of these cushions on "hard surface" seats such as benches, plastic and wood surface chairs will not provide any additional comfort benefits. There is no benefit to be expected for any user of this product that is experiencing pain or discomfort as a result of a physical impairment.

Part No.
ACC410030

SIZE: 18" x 18"
Folds into a compact 9" square package and weighs less than 7oz. making it very portable.

MADE IN THE USA
PART NO. ACC410010

TESTIMONIALS

When working on shooting sites I am frequently sitting in my truck for several hours at a time waiting for a "call out" and tried one of these cushions. I was skeptical but surprised that there was a definite improvement. My legs and hip area had a definite improvement with a noticeable reduction in stiffness.

- Neil, NYC, 9/10/19

We purchased 2 of these cushions to use on our annual 3day drive to San Diego. We feel much better when we get out after 5 hours of driving, so good that we use them in our Condo on the patio chairs. We love them.

- JG & MH, San Diego, CA 10/11/19
